Images: Bangs Island Mussels in Casco Bay, Maine

Responsible Seafood Advocate logo

31 October 2016 James Wright

The Bangs Island Mussels barge is typically moored off of Clapboard Island in Casco Bay, Maine, but during October it was tied up 4 miles away, at Maine Wharf in Portland, for repairs and equipment upgrades. When the barge is fully operational on harvesting days, five workers will man the floating structure to haul ropes from which the mussels are removed, graded, inspected and placed on ice until they reach a land-based processing facility for

debyssing, washing and further inspection.

Wild Ocean Aquaculture LLC President and co-owner Matt Moretti stands on his company's dock in Portland, Maine, holding a Spanish-style pegged rope on which the mussels are attached and then affixed to floating rafts before being submerged into the water for grow-out. In one of the buildings behind Moretti, the company shares processing space with Upstream Trucking, a local seafood distributor that supplies seafood to a small stable of fine dining restaurants in the city. Portland is consistently named one of the top foodie destinations in the United States, and many of them have Bangs Island Mussels on the menu.

A series of new "fuzzy" ropes made of polyethylene will soon replace the ropes currently in use. These ropes are much lighter, particularly when wet, said Moretti, and will make the labor-intensive job of harvesting and processing a little bit easier.

Shown here are some new and lightly used oyster bags, or cages, for growing bivalve shellfish. Moretti, who recently traveled to Japan with a delegation of Maine shellfish growers to witness scallop farming and processing, has worked with various types of shellfish in the past. Scallop farming may be in the future for the company, said Moretti, but the idea is still in the exploratory stage.

The curvy lines on mussel sh	nells are not unlike tree rings, said Moretti, in that they tell a story about growth over
time. The brighter-colored li	ne on this shell could reflect a time of low feeding activity for the mussels, like the
cold winters Maine is known	ı for.

Moretti checks in on a monitoring de	evice used by researchers at the	e University of New England in nearby	
Biddeford, Maine. UNE is monitoring dissolved oxygen, salinity and light	ng the environmental conditions – "the conditions for our succes	s at the farm, including water temperature ss," said Moretti.	es,

"We fit in well" with the working waterfront in Portland, said Moretti. "As wild seafood declines, I'm hopeful that aquaculture will take part of that place, for the working waterfront jobs that fishing has filled for years."

Six years under new ownership, niche shellfish supplier has expanded the operation's production and market distribution

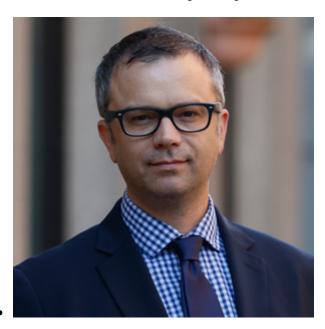

[slides]

This photo slideshow offers a closer look at what restaurants in Maine and beyond are raving about: Bangs Island Mussels. Six years after purchasing the company from its founder, Matt Moretti says the niche shellfish supplier has expanded its annual production by nearly four times, has broadened its market distribution beyond the local region and is incorporating sweet kelp culture as well.

Cup size matters, but for oysters, branding matters more

To name an oyster is to give birth to a brand, essential to stand out in today's raw bar scene. The briny bite-sized morsels are arguably seafood's sexiest offerings, but a memorable moniker (and a quality product) is what keeps them on the menu.
